SUBDNIT: HOMODIMER OR HETERODIMER OF TRAF1 AND TRAF2. THIS SUBDNIT: HOMODIMER OR HETEROCOMPLEX CAN BIND TO THE N-TERMINAL OF INHIBITOR OF APOPTOSIS PROTEINS 1 AND 2 (IAPS), TO RECRUIT THEM TO THE TUMOR NECROSIS FACTOR RECEPTOR 2 (TNFR2).
SUBJECTIVILAR LOCATION: CYTOPLASMIC.
SUBJECTIVILAR LOCATION: CYTOPLASMIC.
SUBJECTIVILAR LOCATIONS A GENCY CLASS ZINC FINGER.
SIMILARITY: CONTAINS A MATH/TRAF DOMAIN.
                                                                                                                                                                                                                                                                                             130

ALSO BINDS TO CDAO AND THE LYMPHOTOXIN-BETA RECEPTOR (BY SIMILARITY).

IF CUNCTION: MAY BE INVOLVED IN GASTRULATION.

IF SUBJURIT: HOMODIMER OR HETERODIMER WITH OTHER THE RECEPTOR ASSOCIATED FACTORS (POTENTIAL).

IT ISSUE SPECIFICITY: IN ADULT, HIGHEST IN BRAIN. ALSO FOUND IN KIDNEY, HEART, THYMUS, SPLEEN, LUNG, MUSCLE, TESTIS AND OVARY. NOT FOUND IN LIVER.

IN THE EMBRYO, EXPRESSED FROM 6.5. HIGHEST IN DEVELOPMENTAL STACE: IN THE EMBRYO, EXPRESSED FROM 6.5. HIGHEST

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
l or LAP1, strongly associates with the cytoplasmic C-terminal domain (M03148) of Epstein-Barr virus (EBV) latent infection membrane protein (H03148) of Epstein-Barr virus (EBV) latent infection membrane protein (LAP1), a domain that is stringently required for transformed cell growth. LAP1 is related to murine tumour necrosis factor receptor associated factor TRAF2. A related novel B-cell protein (M03147), EBI6, appears to be the human homologue of murine TRAF1. LAP1 polypeptides, esp. the LMP1 binding domain, coiled coil domain and c-terminal domain can be used to inhibit LMP1-TRAF interaction. Such polypeptides, which may be obtd. by recombinant means (see also T31273) can be used to treat infection and control cell growth or tumourigenesis associated with LMP1-encoding viruses, partic. EBV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              IMP1 associated protein LAP1.

Example 1: Fig 1D-0: 158pp; English.

This polypeptide comprises a CRAF1 (TRAF-3) protein designated CRAF1-a or TRAF-3-p55, p55, CRAF1(p55), TRAF-3(p55) or CRAF1(p60).

CRAF1-a or TRAF-3-p55, p55, CRAF1(p55), TRAF-3(p55) or CRAF1(p60).

CRAF1-a is a signalling protein that interacts with the cytoplasmic tail of B cell surface molecule CD40 and mediates a variety of T-dependent effects on B cell activation and differentiation. A higher mol.wt. CRAF1, designated CRAF1b (see W27429), p15 (see W27430) and variants of CRAF-1a and CRAF-b (see W27432-37) that comprising from 0-4 zinc finger domains, and nucleic acids encoding them, can be used to inhibit CD40 ligand activation of cells that express CD40 on their surface, particularly by introducing the nucleic acid molecule into the cells, useful to treat conditions characterised by an aberrant or unwanted level of CD40 mediated intracellular signalling, such as organ rejection, or a CD40 dependent immune response in a subject receiving gene therapy. The condition may be dependent on CD40 ligand-induced activation of epithelial or an interactivation of college of the may be dependent on CD40 ligand-induced activation of epithelial or an interactivation of college.

CC This polypeptide comprises a CRAFI (TRAF-3) isoform designated p55del9. It is encoded by exons 4-8 and 10-13 of the human CRAF CC gene (see T90123) and arises by alternative splicing of the sequence for CRAFI-a (see W27431), a signalling protein that CC interacts with the cytoplasmic tail of B cell surface molecule CD40 and which mediates a variety of T-dependent effects on B cell activation and differentiation. A higher mol.wt. CRAFI, designated CC CRAFIb (see W27428), has also been identified, as well as isoforms CC CRAFIb (see W27428), p15 (see W27430) and variants of CRAFI and CC CRAFIb (see W27432-37) that comprise different combinations of 5 clic fingers. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC companies. CRAFI peptides, comprising from 0-4 zinc finger CC cand used to treat conditions characterised by an aberrant or CC companies to CD40 mediated intracellular signalling, such as corgan rejection, or a CD40 dependent immune response in a subject receiving gene therapy. The condition may be an allergic response or an autoimmune response, or may be dependent on CD40 ligand-induced activation of epithelial cells, an inflammatory kidney disease, a smooth muscle cell-dependent disease, or a condition cascolated with Epstein-Barr virus.

Example 1; Fig 1A-0; 158pp; English.

CThis polypeptide comprises a CRAF1 (TRAF-3) protein designated protein tis encoded by exons 1-2, 4-8 and 10-13 of the human protein gene (see T9013). Different isoforms (W77428-37) of CRAF1 CRAF1 (TRAF gene (see T90123). Different isoforms (W77428-37) of CRAF1 craft protein gene designation of the models comprising from 0-4 zinc finger domains, and nucleic acids encoding them, can be used to inhibit CD40 ligand activation of cells that express CD40 on their surface, particularly by introducing the nucleic acid molecule into the cells, and used to treat conditions characterised by an abserrant or unwanted level of CD40 mediated intracellular signalling, such as organ rejection, or a cD40 dependent immune response in a subject recealving gene therapy. The condition may be an allergic response or an autoimmune response, or may be dependent on CD40 ligand-induced activation of epithelial cells, an inflammatory kidney disease, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO9734473-A1.

PS Claim 3; Fig 1; 94pp; English.

C This is a CD40 associated protein (CAP)-1. This CAP is a protein that specifically binds to CD40, a cell surface receptor involved in apoptosis. Agonists and antagonists of CAP can increase or decrease the level of CAP expression in a cell and can thereby modulate the function of the cell. Such compounds can be used to treat cancer, autoimmune diseases like asthma, hay fever, rheumatoid arthritis and immunodeficiency diseases and neurodegeneration. Antibodies that bind specifically to CAP can be used to assay CAP, to detect pathologically caltered levels. The encoding nucleic acid can be used to identify crelated genes and to express CAP for gene therapy.

Example 1; Fig 1A-O; 158pp; English.

This polypeptide comprises a CRAFI (TRAF-3) protein designated produced by exons 1-2, 4-7 and 10-13 of the human provided by exons 1-2, 4-7 and 10-13 of the human CRAFI gene (see T90123). Different isoforms (W27428-37) of CRAFI craft produced produced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                D 25-SEP-1997.

Example 1; Fig 1A-O; 158pp; English.

CC This polypeptide comprises a CRAFI (TRAF-3) protein designated ps This polypeptide comprises a CRAFI (TRAF-3) and 10-13 of the human CC prodels, 9 that is encoded by exons 1-2, 4-7 and 10-13 of CRAFI CC (RAF gene (see T90123). Different isoforms (W27428-37) of CRAFI CC (RAF gene (see T90123). Different isoforms with splicing. CRAFI CC encoding them, can be used to inhibit CDA0 ligand activation of CC cells that express CD40 on their surface, particularly by cells that express CD40 on their surface, particularly by CC (CC introducing the nucleic acid molecule into the cells, and used to CC treat conditions characterised by an aberrant or unwanted level of CC (treat conditions characterised by an aberrant or unwanted level of CC (CD40 mediated intracellular signalling, such as organ rejection, or CC (CD40 mediated intracellular signalling, such as organ rejection, or CC actoration of epithelial cells, an inflammatory kidney disease, a crivation of epithelial cells, an inflammatory kidney disease, a smooth muscle cell-dependent disease, or a condition associated contractors.
                                                                                                                                                                                                                                      Š

PS Example 1; Fig 1D-0; 158pp; English.

CC This polypeptide comprises a CRAF1 (TRAF-3) isoform designated CC p55del9; 10. It is encoded by exons 4-8 and 11-13 of the human CC CRAF gene (see T90123) and arises by alternative splicing of the sequence for CRAF1-a (see W27431), a signalling protein that CC interacts with the cytoplasmic tail of B cell surface molecule CD40 and which mediates a variety of T-dependent effects on B cell CC arctivation and differentiation. A higher mol.wt. CRAF1, designated CC CRAF1b (see W27428), has also been identified, as well as isoforms CC picker (see W27432-37) that comprise different combinations of 5 czinc fingers. CRAF1 peptides, comprising from 0-4 zinc finger CC companis, and nucleic acids encoding them, can be used to inhibit CC particularly by introducing a nucleic acid molecule into the cells, and used to treat conditions characterised by an aberrant or CC unwanted level of CD40 mediated intracellular signalling, such as organ rejection, or a CD40 dependent immune response in a subject receiving gene therapy. The condition may be an allergic response or an autoimmune response, or may be dependent on CD40 ligand-culsed activation of epithelial cells, an inflammatory kidney collaborated with Epstein-Barr virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

Example 1; Fig 1A-O; 158pp; English.

CC This polypeptide comprises a CRAFI (TRAF-3) protein designated CC This polypeptide comprises a CRAFI (TRAF-3) protein designated CC prodel9; 10 that is encoded by exons 1-2, 4-8 and 11-13 of the human CC prodel9; 10 that is encoded by exons 1-2 and include CRAFI CC peptides comprising from 0-4 zinc finger domains, and nucleic acids encoding them, can be used to inhibit CD40 ligand activation of CC cells that express CD40 on their surface, particularly by cells that express CD40 on their surface, particularly by crat conditions characterised by an aberrant or unwanted level of CD40 mediated intracellular signalling, such as organ rejection, or a CD40 dependent immune response in a subject receiving gene cutherapy. The condition may be an allergic response or an autoimmune response, or may be dependent on CD40 ligand-induced
                                                                CD40 receptor associated factor 1; CRAFI-b; TRAF-3; p70; human; CD40 mediated intracellular signalling; organ rejection; allergy; Whay fever; autoimmune disease; systemic lupus erythematosus; rheumatoid arthritis; myasthenia gravis; Graves' disease; syndrome; disease; syndrome; syndrome; haemolytic anaemia; diabetes mellitus; psoriasis; hyper immunoglobulin E syndrome; which is syndrome; syndrome; spondyloarthritis; Lyme disease; HIV; syphilis; tube; culosis; arthritis; scleroderma; pulmonary fibrosis; which is syndrome; syndrome; phemonary fibrosis; when preumoconiosis; adult respiratory distress syndrome; pneumonitis; when shestosis; siliconosis; Farmer's lung; hepatitis; cirrhosis; where society siliconosis; farmer's glomerulonephritis; when cheschesis; multiple sclerosis; glomerulonephritis; multiple sclerosis; goodpasture's disease; mephropathy; when coh-Schoenlein purpura; polyarteritis; multiple myeloma; wegener's granulomatosis; cryoimmunoglobulinaemia; Sjogren's sydrome; when coh-Schoenlein purpura; polyarteritis; multiple myeloma; sydrome; sydrome; sydrome; sydrome; sydrome; sydrome; sydrome; syd
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    25-SEP-1997;

Agonists and antagonists of CAP can increase or decrease the level of CAP expression in a cell and can thereby modulate the function of the cell. Such compounds can be used to treat cancer, autoimmune diseases like asthma, hay fever, rheumatoid arthritis and immunodeficiency diseases and neurodegeneration. Antibodies that bind specifically to CAP can be used to assay CAP, to detect pathologically altered levels. The CAP-I encoding nucleic acid can be used to identify related genes and to express CAP for gene therapy.
                                                                                                                                18-MAR-1998 (first entry)
Murine TRAF5, a novel TNF receptor associated
TRAF5; tumour necrosis factor receptor; TNF;
TNF signal transducer system.

The present sequence represents a novel protein, designated TRAF5, which is a member of the tumour necrosis factor (TNF) receptor associated factor family. The TRAF5 protein has a coiled-coil domain, a leucine zipper motif and binds to lymphotoxin beta receptor and to CD30, but not to CD40 or TNF receptor 2. TRAF5 and its corresponding DNA are useful for the investigation of the signal transducer system of the TNF receptor family and the functions of TRAF proteins. They can also be used as probes for research and diagnostic purposes, and investigation of the specific applications of potential therapeutic agents.

Claim 2; Pages 41-44; 80pp; Japanese.
The present sequence is murine TRAF5 a protein of the tumour necrosis factor (TNF) receptor associated factor family. TRAF5 products can be used in immunisation, to treat allergies and as cell proliferation inhibitors. They can also be used to screen TRAF5 inhibitors or regulators.

CC claim 3; Pages 46-49; 69pp; Japanese.

CC factor family. The TRAFS protein has a coiled-coll domain, a leucine

CC factor family. The TRAFS protein has a coiled-coll domain, a leucine

CC collos or TRAF protein has a coiled-coll domain, a leucine

CC collos or TRAF receptor 2. TRAFS and its corresponding DNA are useful for

CC the investigation of the signal transducer system of the TNF receptor

CC family and the functions of TRAF proteins. They can also be used as

CC probes for research and diagnostic purposes, and investigation of the

Specific applications of potential therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       망
